

NEM Founding Board Member, Lon Wong, Joins Spatium's Advisory Board

Spatium is proud to announce that Lon Wong has now officially joined our team as an Advisor. Lon is a long-time blockchain advocate and was the founder and First President of the NEM.io Foundation, a global open-source blockchain technology project. Under his leadership, NEM became one of the top blockchain projects in the crypto landscape and achieved a market cap of \$18 billion at its peak.

“Having someone of Lon’s calibre and expertise on our Advisory Board bolsters the credibility and confidence in the Spatium project,” said Geray Yusifov, CEO and Co-Founder of Spatium. “His knowledge in blockchain technology is unparalleled and his insights into building an ecosystem will be particularly valuable given his leadership and experience in the industry.”

Lon who is also the founder for Dragonfly Fintech and ProximaX.io, which is his current project, has more than 30 years of experience as a technopreneur.

“Security is a great concern in cryptocurrency transactions especially in mass market utilization. Spatium provides a transparent solution where the user does not need to understand the technical complications associated with the security of cryptocurrency transactions and storage. Regardless of whether the user is a small user or carrying out an ICO, the Spatium solution provides the same level of security and peace of mind.” said Lon Wong.

“I am excited that they have already proven success by releasing the Beta version of their software wallet. With the expertise of the current management team, the milestones leading to the production of the Spatium solution should be able to hit its target, and I look forward to being part of the team’s continued success”, he added.

Spatium’s mission is to ensure that cryptocurrency assets are fully secured and suitable for mass adoption. Lon Wong’s addition to our Advisory Board is a strong endorsement and vote of confidence in the Spatium project.
